

# Home Visiting Program

## Wyoming

**Wyoming Home Visiting Program** is funded in part through federal investments from the Maternal, Infant, and Early Childhood Home Visiting Program (Home Visiting Program), and provides voluntary, evidence-based home visiting services to at-risk pregnant women and parents with young children.

The Home Visiting Program, which builds upon decades of scientific research, provides voluntary, culturally-appropriate, individually-tailored supports to families in their homes, including providing information about children's health, development, and safety, and when appropriate, referrals to support services.

Through federal grants from the Home Visiting Program, in fiscal year 2014, home visitors in Wyoming:

- Made 762 home visits to 144 parents and children in 78 families
- Enrolled 143 new parents and children to the program
- Served families living in communities in 4 counties across the state, or 17% of Wyoming counties

The Home Visiting Program in Wyoming:

- Develops and provides additional professional development trainings for early childhood specialists

Like all Home Visiting Program grantees, Wyoming uses evidence-based home visiting models that are proven to improve child health and to be cost effective. Wyoming leverages federal funds to implement the following models to serve children and families across the state:

- [Parents as Teachers](#)

**Counties with home visiting services funded by federal grants from the Home Visiting Program (as of February 2015)\*:**

\*Albany, Fremont, Natrona, Sweetwater

The Maternal, Infant, and Early Childhood Home Visiting Program is administered by the Health Resources and Services Administration (HRSA) in close partnership with the Administration for Children and Families (ACF). The Program supports at-risk pregnant women and families, and helps parents of children from birth to kindergarten entry tap the resources and hone the skills they need to raise children who are physically, socially, and emotionally healthy and ready to learn.

Research shows that home visits by a nurse, social worker, early childhood educator, or other trained professional during pregnancy and in the first years of life improve maternal and child health, prevent child abuse and neglect, increase positive parenting, and enhance child development and school readiness.
